In-Office 3-Dimensional Scans

Cone Beam technology has brought high-definition imaging to the head and neck region.
* 90% less radiation than hospital scan
* Patient seated upright
* Open gantry reduces patient’s fear
* 8.5 second scan time

Implant Surgery
* Determine bone volume of implant site
* Avoid inferior alveolar nerve or sinus
* Evaluate donor sites for bone grafting
* Exports to Simplant or Nobel BioGuide

Orthodontics / TMJ
* Exports to Dolphin for Ceph tracing and treatment plan.
* Visualize impacted teeth for possible eruption or extraction.
* Evaluate regions for mini-implant orthodontic anchorage.
* TM joint imaging
**Next Generation i-CAT**

**Insurance Billing**  
Payment is required at the time of scan. i-CAT imaging can be billed under medical insurance provided the patient does not have a HMO plan. We have experience in billing medical insurance.

**Same Day Service**  
In most cases, we can provide the imaging service on the same day. We will provide the ordering doctor a print out of the region of interest or a CD ROM of the data to be viewed on the doctor’s office computer.

**The Future is Now**  
Give your patients the technology edge. Conventional x-rays only show two dimensional information. Three-dimensional imaging eliminates superimposition of closely associated structures.
